

The DOAG is the only organized group representing the interests of Oracle users in Germany. While it is economically and legally independent from Oracle Deutschland B.V. &Co. KG they cooperate in technical and organizational matters.

To meet the needs of all Oracle users equally, the DOAG addresses the users in accordance with their field of work through the different communities. Currently those communities exist in the areas "Database", "Development & Business Intelligence/Data Warehouse", "Infrastructure & Middleware" as well as "Business Solutions".

The DOAG's objectives are to exchange information and experience, pass on knowledge about using and handling Oracle products and represent the users' interests towards the manufacturer. This is achieved by engaging in regular activities such as meetings with regional groups, Special Interest Groups, specialized conferences, the annual user conferences, and meetings with the Oracle management, by cooperating with Oracle user groups on European level and by publishing several publications.

Every two years, the more than 4,500 members (as of June 2012) elect a new board of directors.
