

From Zero to a Full OBIEE Model

in 45 Minutes

November 21 - 24
in Nuremberg

2017.doag.org

In the next ~~hour~~ ... 45 minutes

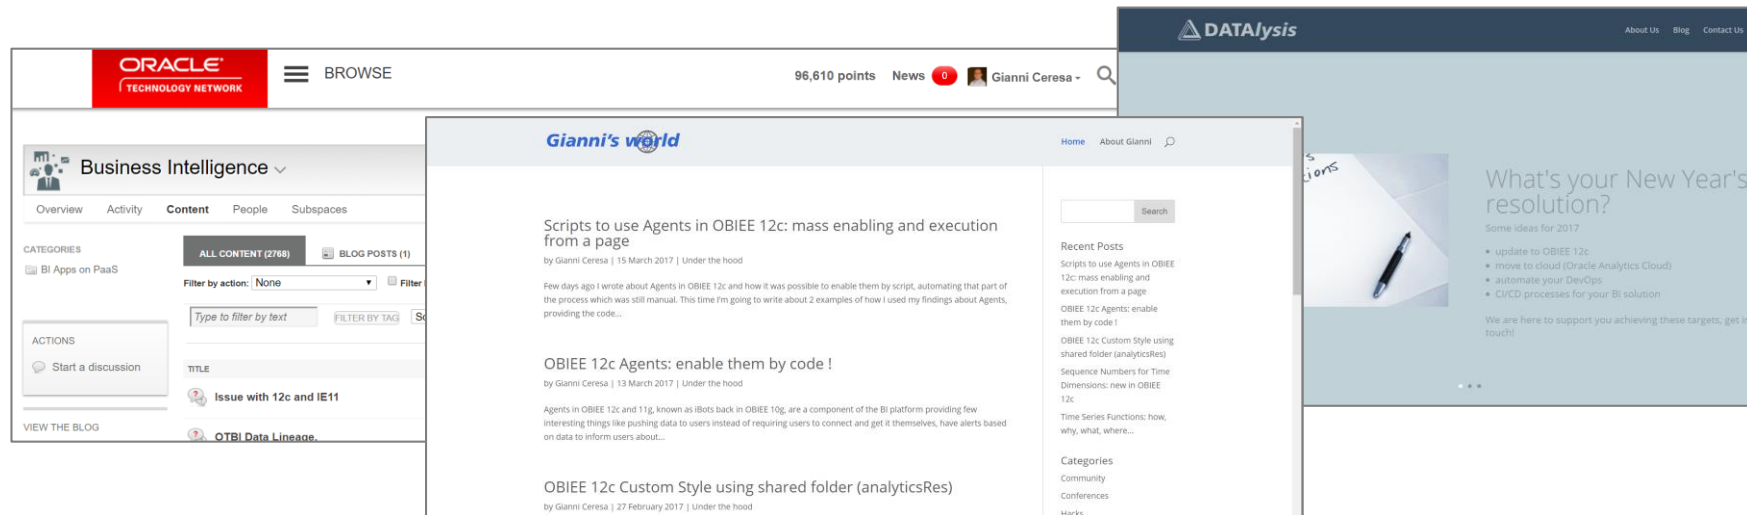

OBIEE has the reputation to be that old style BI platform, managed by IT and taking months to deliver every single project. This reputation is very far from the truth as OBIEE is a perfect fit for rapid prototyping and setting up a model a matter of minutes.

In this session we start with an empty setup and end up, 45 minutes later, with a full RPD using relational sources and a federation with an Essbase cube. LIVE! All will be done in real time while telling you about each step. Isn't that fast and agile? And it's OBIEE!

If you are new to OBIEE or already using it but a bit reluctant about "online editing" this is definitely for you.

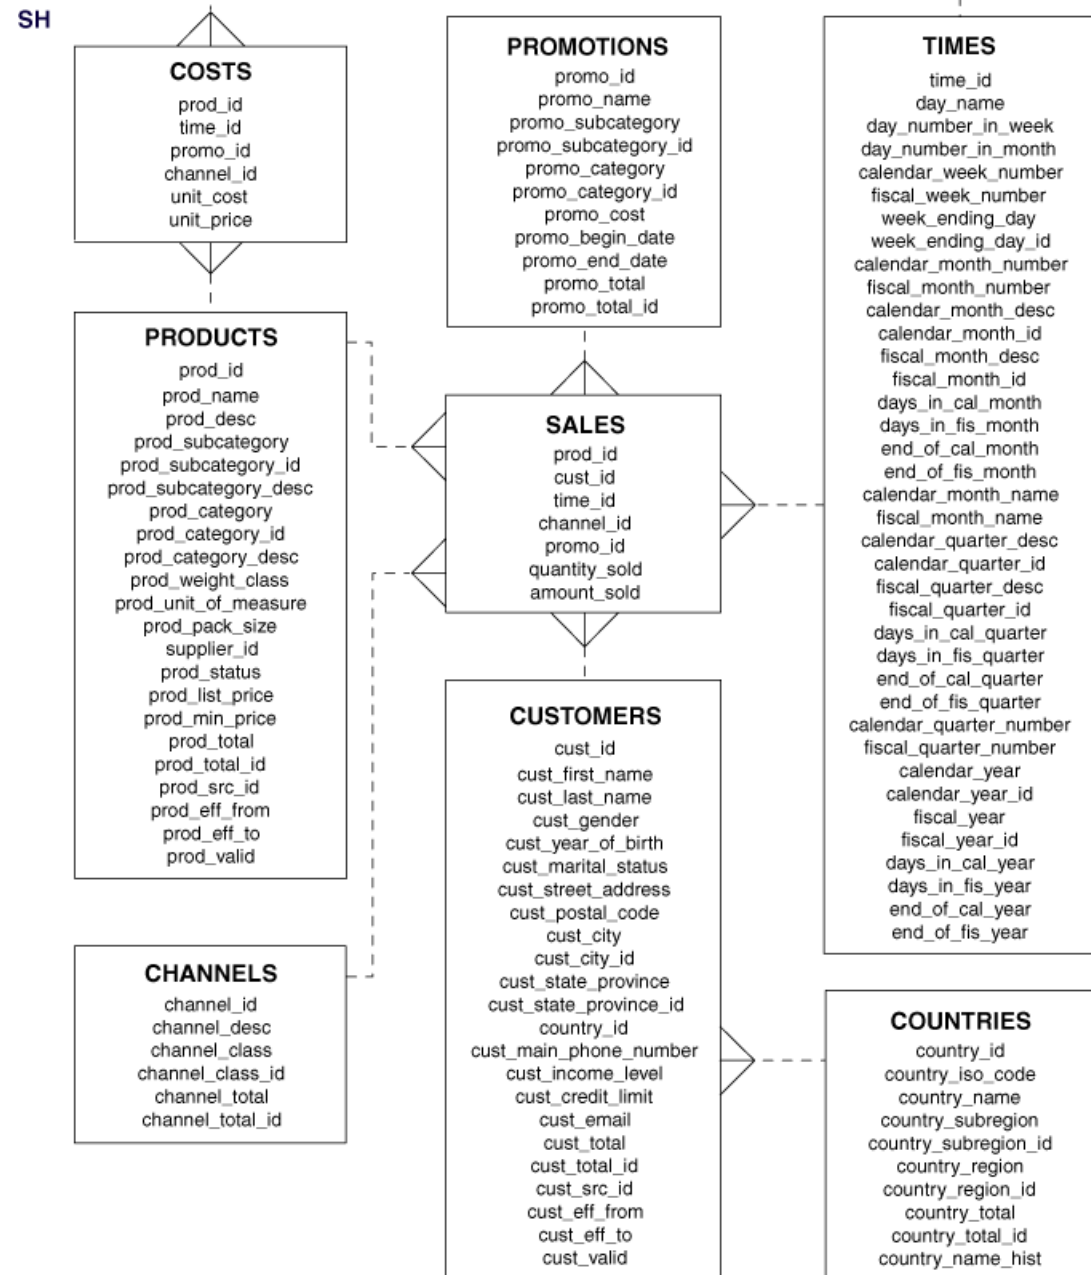

Gianni Ceresa

- Managing Director of DATAlysis GmbH (Switzerland)
- Working with BI and EPM tools for about 10 years
- Part-time blogger on gianniceresa.com
- Full-time IRC (freenode | #obihackers) resident
 - Same group on Telegram <http://telegram.me/obihackers>
- ODC (ex OTN) forums addict
- Technology geek (or just geek in general)

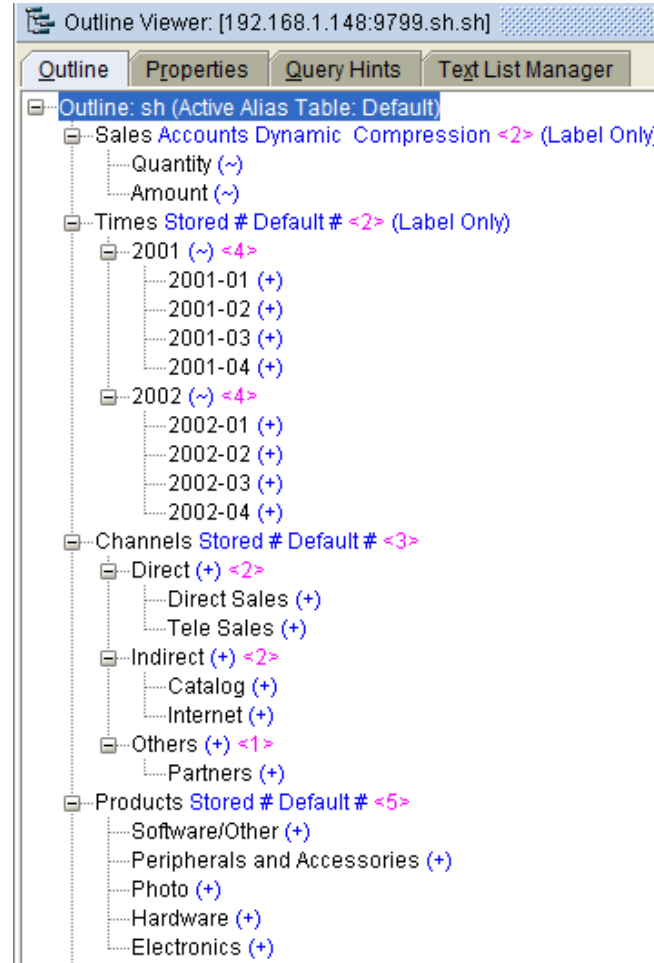

Source Database

- SH: the sample Oracle DB Schema

Source Essbase

- Simple cube with
 - Year - Quarter
 - Channels
 - Product category
 - Countries

Live demo

Live demo using an OBIEE 12.2.1.1.0 clean install with only SampleApp Lite deployed (to validate OBIEE works fine)

*12.2.1.1.0 is just because I recycle an existing VM.
Any 12c (or even 11g) is the same...*

Conclusion

OBIEE can do it!

It's quick, flexible and a great prototyping tool as long, as you add some imagination on how to make things ...
