5 observations at coderetreats

03 sep 2017

posted by steven

Recently, I facilitated another coderetreat. As in previous retreats, the participants who experienced their first coderetreat showed a pretty similar behavior. It occurred to me, that nearly EVERY coderetreat-first-timer shows the exact same behavior. This article is about how people will act, what they will code and what they most likely will learn during their first coderetreat.

git: to squash or not to squash?

30 aug 2017

posted by steven

Until recently, I told my team to squash all of their commits on a given feature branch

featured repositories

Writing Awesome Java Code
JavaFX Workshon

Who are you?

- Name?
- Erfahrung?
- Java 8?
- Awesome?

Didn't listen. Where can I read up on this?

Github: stevenschenke/mikadokata

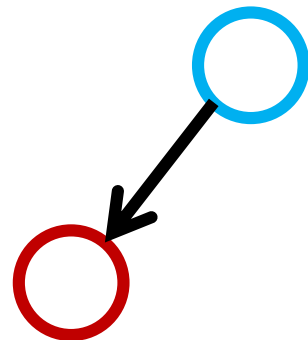

The screenshot shows the GitHub interface for the repository 'stevenschenke / WritingAwesomeJavaCodeWorkshop'. At the top, there are navigation tabs for Code, Issues (21), Pull requests (0), Projects, Wiki, and Settings. Below the repository name, it says 'No description or website provided.' and shows statistics: 64 commits, 3 branches, 0 releases, 2 contributors, and CC0-1.0 license. There are buttons for 'Branch: develop', 'New pull request', 'Create new file', 'Upload files', 'Find file', and 'Clone or download'. A commit history table is visible, listing recent changes to files like 'src', '.gitignore', '.travis.yml', 'LICENSE', 'README.md', 'pom.xml', and 'shippable.yml'. At the bottom, the 'README.md' content is partially visible, showing the title 'Writing Awesome Java Code Workshop'.
